

# Trees and Tree Walks

CS 214, Fall 2019

Let's talk trees

# Definition

A tree is a graph with no cycles:

## Rooted trees

We can *root* a tree by choosing one vertex to be the root:

This lets us talk about *children* and *subtrees*

## Rooted, ordered trees

An *ordered* tree assigns an order to the children of each node:

Now we can refer to the 1st child, 2nd child, etc.

## *k*-ary trees

In a *k*-ary tree, each node has at most *k* children:

a 3-ary tree

a 2-ary tree

# Rose tree

A rose tree is an  $\infty$ -ary tree:

# Full trees

A  $k$ -ary tree is full if every non-leaf node has  $k$  children:

full binary tree

not full

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

## Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

## Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

## Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

# Complete trees

A tree is complete if every level is full of nodes except the last, which must be filled from the left:

## What's a tree walk?

A tree walk traverses a tree and linearizes the vertices in some order

## Pre-order walk

Visit each node *before* its children:

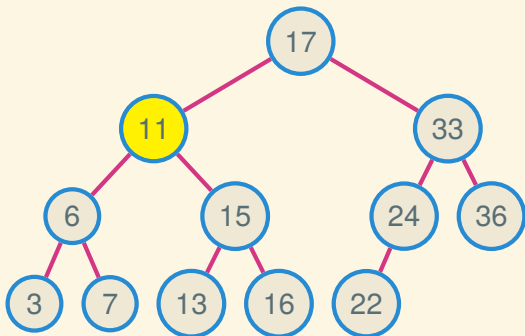

Pre-order: 17

## Pre-order walk

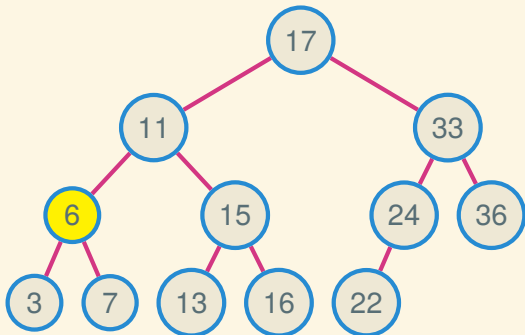

Visit each node *before* its children:

Pre-order: 17, 11

## Pre-order walk

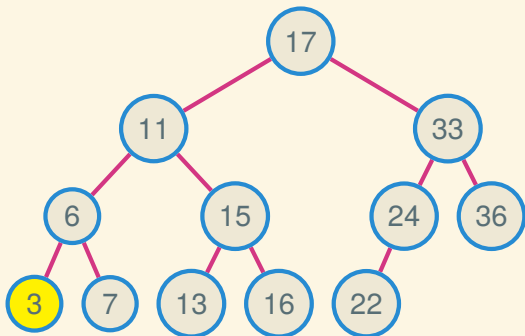

Visit each node *before* its children:

Pre-order: 17, 11, 6

## Pre-order walk

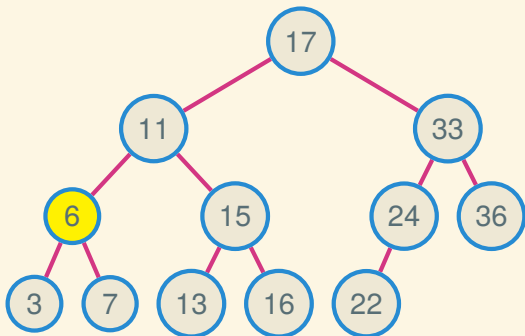

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3

## Pre-order walk

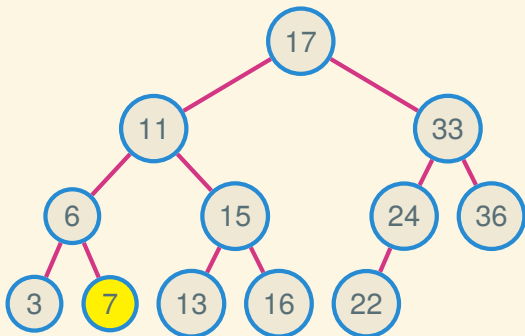

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3

## Pre-order walk

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7

## Pre-order walk

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7

## Pre-order walk

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7

## Pre-order walk

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15

## Pre-order walk

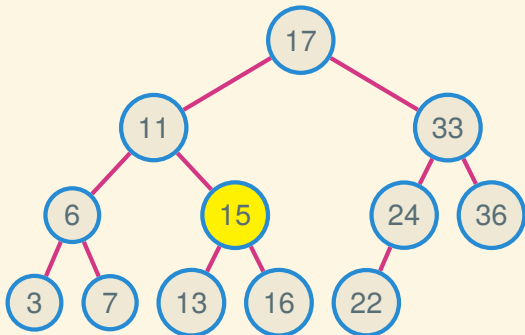

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13

## Pre-order walk

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13

## Pre-order walk

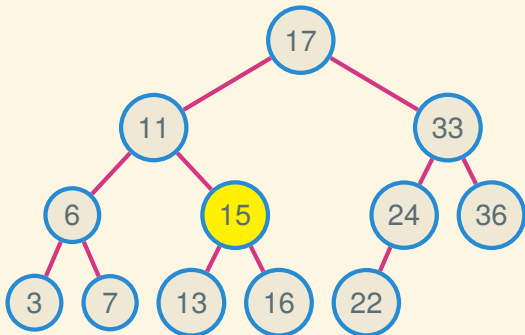

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16

## Pre-order walk

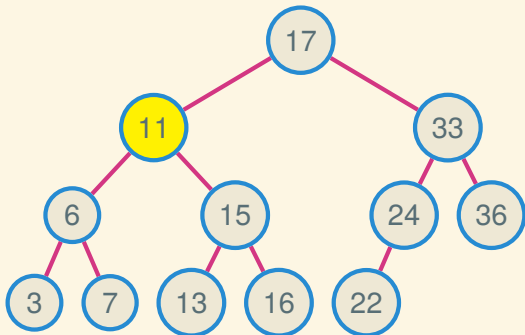

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16

## Pre-order walk

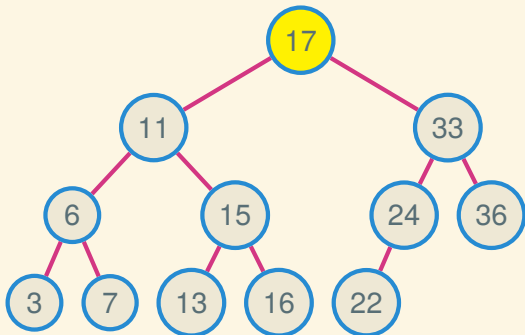

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16

## Pre-order walk

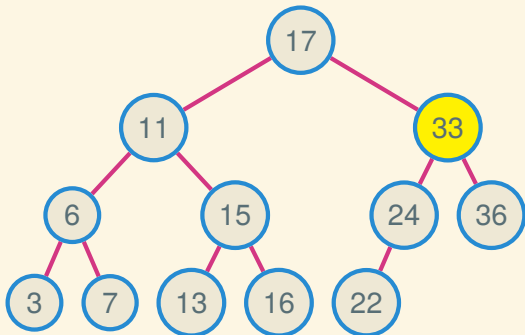

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16

## Pre-order walk

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16, 33

## Pre-order walk

Visit each node *before* its children:

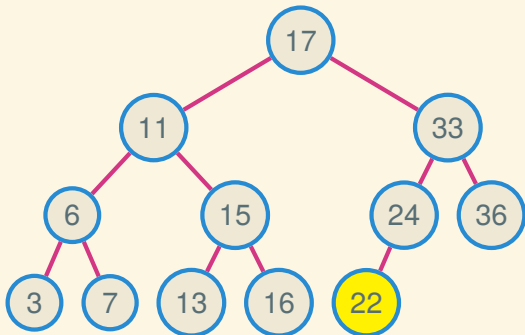

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16, 33, 24

## Pre-order walk

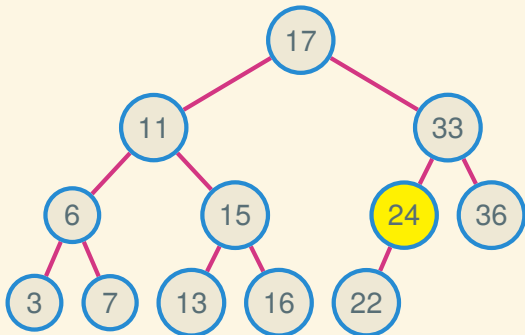

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16, 33, 24, 22

## Pre-order walk

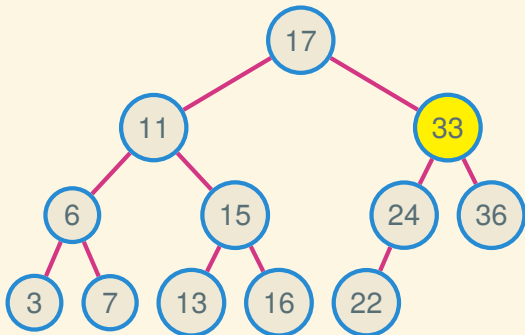

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16, 33, 24, 22

## Pre-order walk

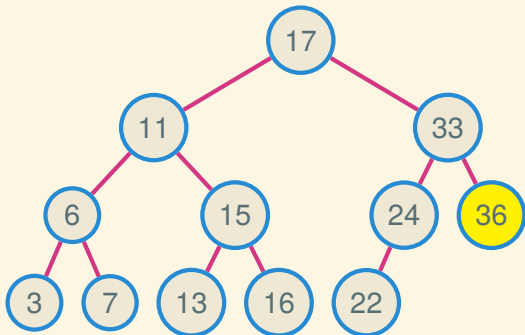

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16, 33, 24, 22

## Pre-order walk

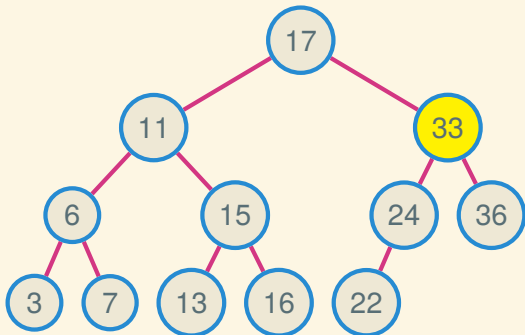

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16, 33, 24, 22, 36

## Pre-order walk

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16, 33, 24, 22, 36

## Pre-order walk

Visit each node *before* its children:

Pre-order: 17, 11, 6, 3, 7, 15, 13, 16, 33, 24, 22, 36

## Post-order walk

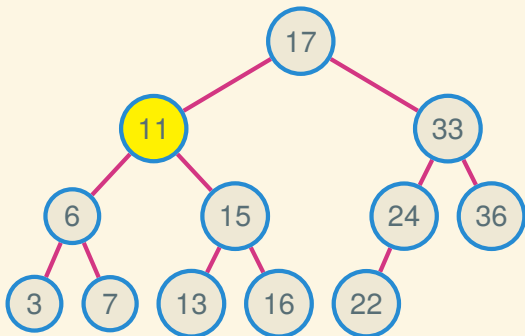

Visit each node *after* its children:

Post-order:

## Post-order walk

Visit each node *after* its children:

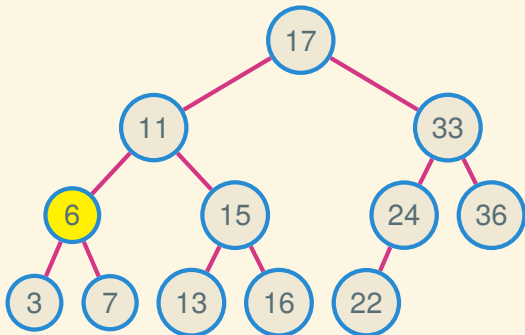

Post-order:

# Post-order walk

Visit each node *after* its children:

Post-order:

## Post-order walk

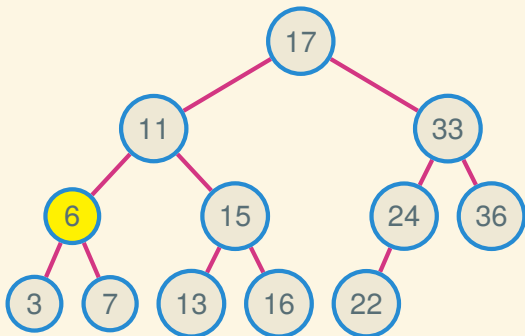

Visit each node *after* its children:

Post-order: 3

## Post-order walk

Visit each node *after* its children:

Post-order: 3

## Post-order walk

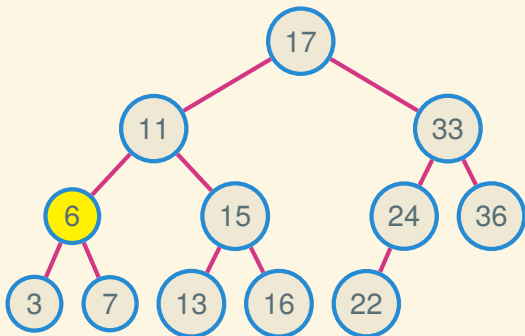

Visit each node *after* its children:

Post-order: 3, 7

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6

## Post-order walk

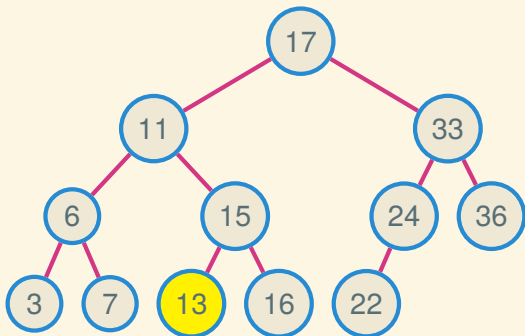

Visit each node *after* its children:

Post-order: 3, 7, 6

## Post-order walk

Visit each node *after* its children:

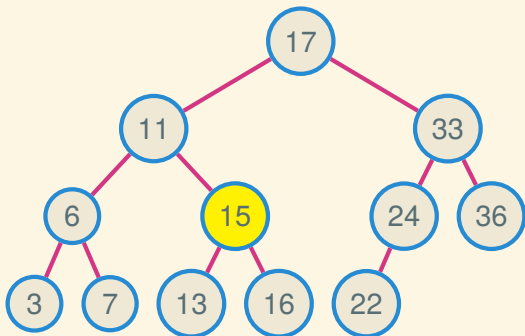

Post-order: 3, 7, 6, 13

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11

## Post-order walk

Visit each node *after* its children:

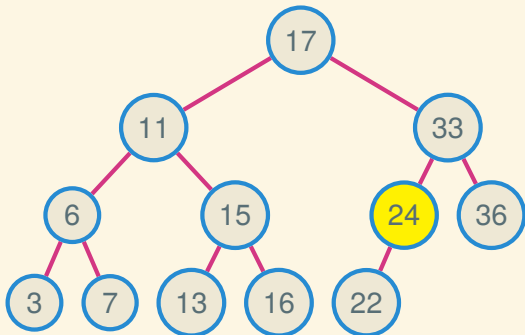

Post-order: 3, 7, 6, 13, 16, 15, 11, 22

## Post-order walk

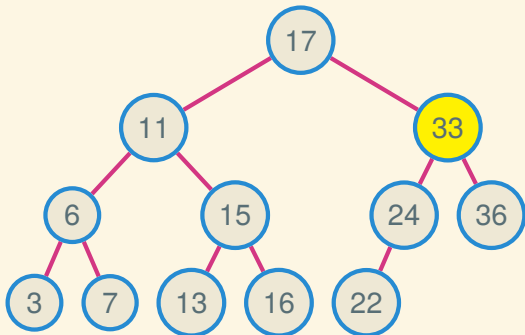

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11, 22, 24

## Post-order walk

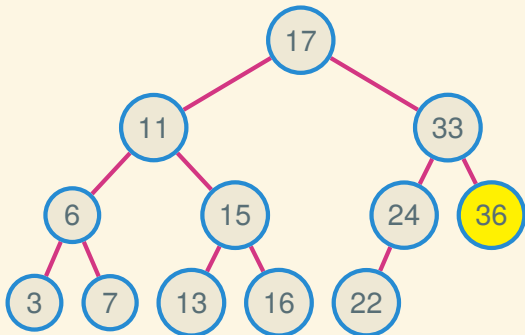

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11, 22, 24

## Post-order walk

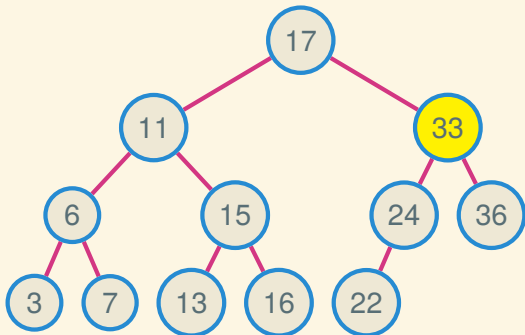

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11, 22, 24, 36

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11, 22, 24, 36, 33

## Post-order walk

Visit each node *after* its children:

Post-order: 3, 7, 6, 13, 16, 15, 11, 22, 24, 36, 33, 17

# In-order walk

Visit each node *between* its children:

In-order:

# In-order walk

Visit each node *between* its children:

In-order:

## In-order walk

Visit each node *between* its children:

In-order:

# In-order walk

Visit each node *between* its children:

In-order: 3

## In-order walk

Visit each node *between* its children:

In-order: 3, 6

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13

## In-order walk

Visit each node *between* its children:

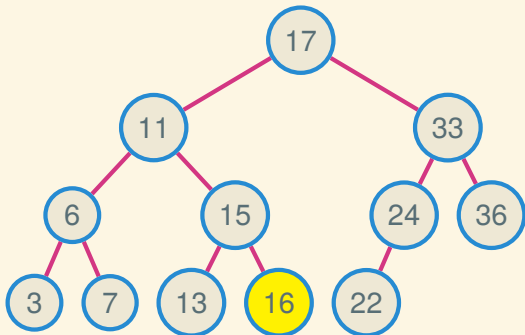

In-order: 3, 6, 7, 11, 13, 15

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17

## In-order walk

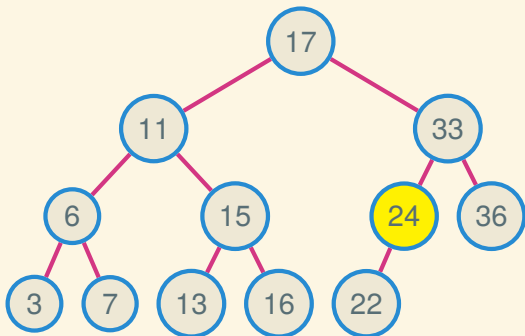

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17, 22

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17, 22, 24

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17, 22, 24, 33

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17, 22, 24, 33, 36

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17, 22, 24, 33, 36

## In-order walk

Visit each node *between* its children:

In-order: 3, 6, 7, 11, 13, 15, 16, 17, 22, 24, 33, 36

# Tree walk pseudocode

## Procedure

```
PreOrder(node) is
  if node is not null then
    visit node;
    PreOrder(node.left);
    PreOrder(node.right)
  end
end
```

## Procedure

```
PostOrder(node) is
  if node is not null then
    PostOrder(node.left);
    PostOrder(node.right);
    visit node
  end
end
```

## Procedure InOrder(*node*) is

```
  if node is not null then
    InOrder(node.left);
    visit node;
    InOrder(node.right)
  end
end
```

## Level-order walk

Visit all of each level before the next level:

Level-order: 17

## Level-order walk

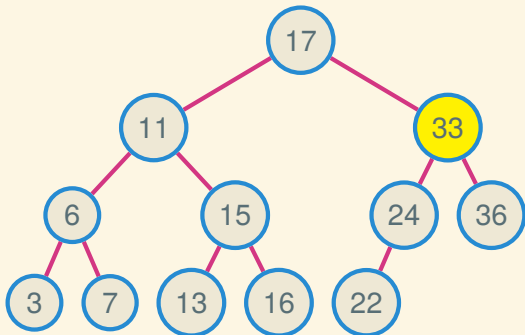

Visit all of each level before the next level:

Level-order: 17, 11

## Level-order walk

Visit all of each level before the next level:

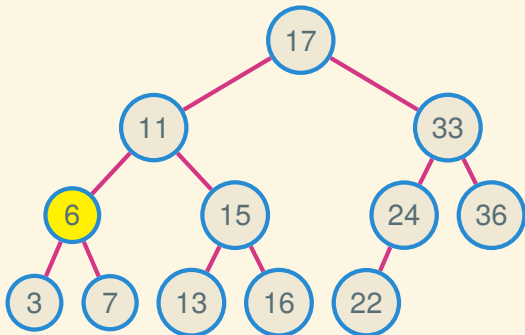

Level-order: 17, 11, 33

## Level-order walk

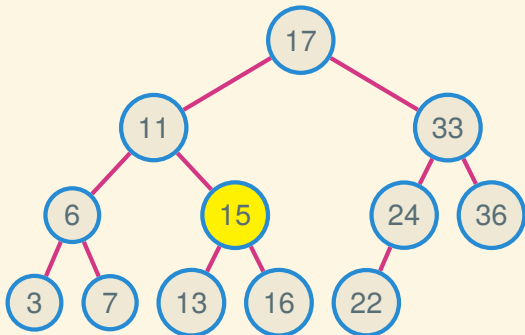

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6

## Level-order walk

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6, 15

## Level-order walk

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6, 15, 24

## Level-order walk

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6, 15, 24, 36

## Level-order walk

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6, 15, 24, 36, 3

## Level-order walk

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6, 15, 24, 36, 3, 7

## Level-order walk

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6, 15, 24, 36, 3, 7, 13

## Level-order walk

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6, 15, 24, 36, 3, 7, 13, 16

## Level-order walk

Visit all of each level before the next level:

Level-order: 17, 11, 33, 6, 15, 24, 36, 3, 7, 13, 16, 22

# Level-order pseudocode

We use a queue (FIFO) to visit the nodes level-by-level:

**Procedure** LevelOrder(*root*) **is**

```
  queue ← a new queue;  
  Enqueue(queue, root);
```

```
  while queue is not empty do
```

```
    node ← Dequeue(queue);
```

```
    if node is not null then
```

```
      visit node;
```

```
      Enqueue(queue, node.left);
```

```
      Enqueue(queue, node.right)
```

```
    end
```

```
  end
```

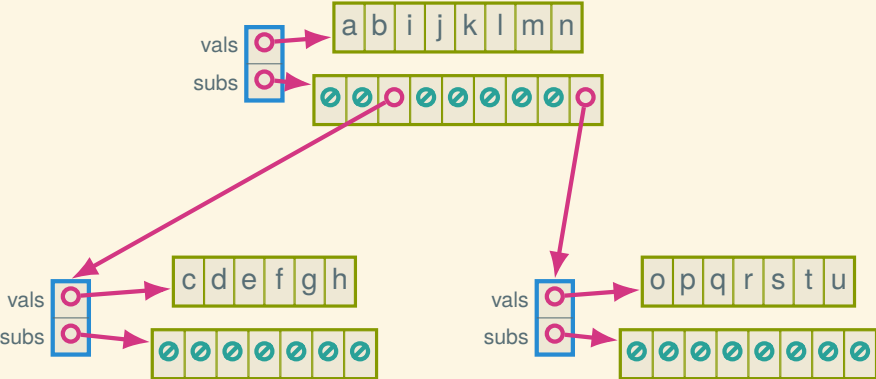

```
end
```
